## ABOUT THE STUDY

This corridor is an economically vital industrial and trade area as it provides connectivity for passengers and cargo to the National Highway Freight Network, the Florida East Coast Railyard, Palmetto Expressway, and the Miami International Airport. This analysis will identify congestion management, safety mitigation strategies, multimodal and accessible transportation options, and innovative technology to improve overall quality of life.

## PROJECT NEEDS

Over the past decade, the movement of goods and services through freight transportation has become an essential part of life and is fundamental to our national, regional, and local economies. The ever-growing population and tourism have created an increase in overall demand on freight mobility. However, the limited capacity of the transportation network requires a proactive system to accommodate more people than ever before.
